Description

Advanced Shipment Tracking WP Plugin Free Download

The Advanced Shipment Tracking V3.5.3 extension for WooCommerce allows you to easily add tracking and fulfill your orders straight from the Orders page. Use it while editing orders or as a quick way to fulfill orders from the orders list.

Advanced Shipment Tracking (AST) provides all you need to manage and automate the WooCommerce fulfillment workflow.

Easily add tracking information and fulfill orders, keep your customers informed, reduce time spent on post-shipping inquiries and increase overall customer satisfaction.

KEY FEATURES:

Optimize the Fulfillment Workflow – AST allows you to Rename the label of the WooCommerce “Completed” Order Status to “Shipped” and to enable a custom order status “Partially Shipped” for orders that you ship in separate packages, or at different times.

Tracking Info Widget – Send customers their shipping information and a way to track their order with a fully customizable responsive widget. The tracking info widget will display in the order status emails and on the View Order page (my-account).

Add Tracking information to orders – Easily add tracking information to WooCommerce orders when editing an order or when viewing the orders list on the orders page.

Add Multiple tracking numbers to the same order– you can add multiple tracking numbers to the same order.

Fulfill orders when adding tracking numbers – AST allows you to fulfill the order and send the shipment information to your customers when adding the tracking information.

300+ Shipping Providers with a predefined tracking link – Select your preferred shipping providers from a list of 300+ shipping providers. The tracking link will direct your customers to track their shipment on the shipping provider website.

Shipment Tracking API – Use the Shipment Tracking API endpoint to update the tracking numbers generated by 3rd party services and fulfill orders from external systems.

Import tracking info from CSV Files – In case your warehouse or dropshipper provides tracking information in CSV files, AST provides a quick and easy interface to import multiple tracking numbers to orders in bulk from a CSV so you can avoid the repetitive work of copy & paste tracking numbers into orders.

AST PRO FULFILLMENT MANAGER:

Integrations & Compatibility – built-in integrations with ShipStation, WooCommerce Shipping, Ordoro, Royal Mail Click & Drop, Dear Inventory, Ali2Woo, Printify and more, to automate the fulfillment workflow

Fulfillment dashboard – manage and fulfil your orders from a centralized fulfillment dashboard

Tracking per item – split order tracking and attach tracking numbers to order items

Custom email templates with responsive tracking widget

Custom order status Shipped – Create a custom shipping workflow and keep the Completed order for virtual orders

API provider name mapping – map the carrier names updated in the API

API automations – auto-complete partial orders

Custom Shipping Providers – Create custom shipping providers with a custom tracking link

White Label the shipping providers – Update the display name and logo of predefined shipping providers

Auto-detect shipping providers – auto-detect the shipping providers when adding the tracking number to orders (manually only)

Export Tracking info to PayPal – Automatically export the shipment tracking information to the PayPal transaction

Premium Support

TRACKSHIP INTEGRATION:

TrackShip auto-tracks all your shipments with 400+ shipping providers and brings a fully branded tracking experience to your WooCommerce store. TrackShip allows you to build a relationship with your customers, reduce time spent on customer service, further engage customers after shipping and provide a superior post-purchase experience to increase customer satisfaction and repeat purchases.

AST is fully compatible with TrackShip for WooCommerce and the shipment tracking information that you add to orders will automatically be sent to TrackShip when you fulfill your orders.

COMPATIBILITY

The Advanced Shipment Tracking plugin is compatible with many other plugins such as shipping label plugins and services, email customizer plugins, Customer order number plugins, PDF invoices plugins, multi vendor plugins, SMS plugins and more.
