Description

Belloo v4.2.7 – Complete Premium Dating Software

Belloo is a Complete dating software with incredible out of the box ready-to-use functionality. Its a fully Ajax script for a fast response of every action on the script, also allowing users to videochat and keep using the site durning a videocall.

Belloo is a Complete dating software with incredible out of the box ready-to-use functionality.

Its a fully Ajax script for a fast response of every action on the script, also allowing users to videochat and keep using the site durning a videocall.

I have to emphasize that there is no dating sites with a built in videocall system like ours, that let you videocall without expend crazy amount of money by using external services like Twilio

Belloo have all the features that a powerfull dating software needs to success.

This script is built on simple PHP making it very easy to edit the code.

Customize to fit your needs or contact us to for individual customizations.

POWERFUL MOBILE SITE

Belloo mobile site is powered by Angular you can easily convert it into a mobile app if you wat iOS and Android, the webview of the mobile site is just unreal, works even better than much other apps around there, try it by yourself

The mobile site for iOS and Android have been battle tested and are being used by hundreds of customers around the globe.

With a familiar looking User Interface and a smooth User Experience, dating apps that are created with the Premium Dating Script are the logical choice for anyone serious about building their dating empire!

MAKE MONEY

Belloo plugins ecosystem all working together is thinked and configurated to actually engage visitors.

Which in turn drives the long list of things to purchase with credits including featured ads and the awesome granted with super powers for premium users.

Generating revenue is simple, fast and guaranteed.

Requirements:
PHP 7.1 or higher
IonCube Module
MySQLi.
GD Library.
cURL.

Zip Module

mbstring.

allow_url_fopen.

SSL certificate (just require for video chat).

Videocall browsers support

Works properly in Chrome and Firefox, also allow cross browsers videocall. but if you will test it with the same computer do it with same browser and one window must be incognit.

Please read this article about our videocall deviece connectivity [Read Article](#)

2016 note: Chrome updated his security to only allow getUserMedia(); access to SSL domains, so you must have HTTPS domain for use the videochat in chrome, on mozilla is working fine.
