Description

Candidate Finder V1.7 Recruitment Management System Free Download

Candidate finder is an advance recruitment and applicant tracking system specially designed for any organization's HR department or head hunting / recruitment firms. It's unique job board offers you to do an analysis and scrutiny among applying candidates before having them on-board. The built in scaling tools (quizzes, interviews and traits) can be assigned to all or some particular candidates helping you to do an overall and specific comparison among them for their skills and abilities. You can download resumes, quiz results and interview results for all or a set of selected candidates by applying different filters.

The system is built on codeigniter with a complete and easy to use admin panel for controlling content and features on the system. With the minimum set of installation requirements, it can be set up on any apache or nginx hosting. The front end is built on a nice and responsive template with features for candidates to built their resume, attempt quizzes and more.

Installation & Setup

Instructions are included in documentation for installation and complete usage of the system with step by step pictorial guides. Follow this video for database setup and script installation.

Server Requirements

The set of requirements are very simple and are available/enabled on most of the hosting providers.

Apache or nginx

Database support (e.g. mysql or mssql)

PHP 5.6 or greater

PDO extension support

PHP GD library support

OpenSSL support

CURL support

Uploads folder needs to be writeable
