Description

ChatPion V7.2.9 — a white label self-hosted PHP script— is a multichannel marketing software, mostly for Facebook messenger marketing. With ChatPion, you can build fully interactive and highly responsive chatbots smoothly and comfortably. The application has a full-featured Ecommerce platform. On the platform, you can create vigorous and nice-looking Ecommerce stores that can sell products to customers and receive payments, living both inside messenger and on any browser. Indeed, you can utilize the Ecommerce store as the QR code digital menu for your restaurant.

Besides, the application comprises multiple unique and advanced features. To attract people to your business and products, it has a social post scheduler that can publish and schedule posts on different popular social media, such as Facebook, Instagram, Twitter, and so on. To engage customers with your business, it has Facebook and Instagram comment growth tool that can comment and reply to comments under posts and accomplish many other things. Certainly, the application has Email and SMS marketing tool that can send Bulk Emails and SMS to your customers.

In conclusion, ChatPion is a complete and comprehensive solution for your business. It can accomplish everything from encouraging people to your business to turning them into your long-time customers. Simply put, the application not only draws customers but also retains them as satisfied and happy customers. Because it is a white-label SaaS application, you can sell the service of ChatPion to your end-users— establishing a software service business as your own brand. This advantage is limited to Extended Licenses only.

ChatPion is genuinely user-friendly. It has a well-designed dashboard where you can see the users' interactions in a graphical view. Certainly, ChatPion's every feature has a handy and precise interface to create and edit campaigns, staying in the same place. All the campaigns will be included in a list from where you can see the reports of the campaigns and edit, delete and clone the campaigns.

Server Requirements & Installation

PHP v7.0 to v7.3 & MySQL v5.x

Make sure curl is enabled, mbstring is enabled, set_time_out is enabled, safe_mode is off, open_base_dir has no value, multibyte string PHP extension enabled, allow_url_fopen=1 and mysqli support is on.

Make sure Apache server's mod rewrite is enabled.

See installation video in video manual section below.

It will need ZipArchive php module installed to unzip and install addon. If you can not have this php module then you have to upload and unzip addon files manually in application/modules folder and then activate from addon menu.

Your domain must have https to use ChatPion features.

[Note: If you get "404 page not found" error then make AllowOverride in your virtual host.]

For better performance set php max_execution_time, mysql connect_timeout, mysql wait_timeout, max_allowed_packet, max_connections to long limit possible, so that your server can process script for long time if needed.

For fast loading, we recommend to enable GZIP Compression on your server (Most server enable it by default)
