### Description

CodiePie is a whole package to develop any sort of web application which involves admin panel, SaaS application, a web portal, CMS or any back-office app.

CodiePie is a modern open-source WebApp template for admin dashboards and admin panels. It's a responsive HTML template, which is based on the Bootstrap 4X framework. It uses all of the Bootstrap components in design and re-styles many commonly used plugins to create a regular design that can be used as a user interface for backend applications.
