### Description

Cryptocurrency Product for WooCommerce V3.16.11 WP Plugin Free Download

Cryptocurrency Ethereum Crypto V3.16.11 WordPress Plugin for WooCommerce is the best WooCommerce plugin that allows you to sell Ether, Bitcoin or any NFT or ERC20 token for fiat money like USD, EUR, ... or any cryptocurrency, like Bitcoin, Litecoin, Dogecoin or any other WooCommerce supports.

You can sell your NFT or ERC20 tokens for USD, EUR, or even Ether or another ERC20 token by using the Ether and ERC20 tokens WooCommerce Payment Gateway plugin.

It can be a valuable addition to your ICO strategy with the Ethereum ICO WordPress plugin!

Binance Smart Chain (BSC), Polygon (MATIC) and any other EVM-compatible blockchain is supported in the PRO version!

The WordPress Ethereum Wallet plugin auto-creates a user wallet upon registration and allows user to send Ether, NFT or ERC20 tokens from it. Using these two plugins your non-techie customers can register to obtain an Ethereum account address and then buy your tokens to be sent to this new address.

### FREE FEATURES

Sell Ether for any WooCommerce supported currency

Your customer can buy Ether just like any other product in WooCommerce

The Ethereum address required input field is added to the Checkout page for all Cryptocurrency products

Custom user meta key can be configured to fill the Ethereum address field automatically. With a plugin like Ultimate Member you can configure your registration form to include a required Ethereum address field. You can use this address on a checkout page then.

You also can disable the Ethereum address field to restrict user to buy only to the address they provide you on registration.

The Register on checkout is supported without the Ethereum address input requirement

Friendly admin panel

Ethereum Address input field on the Add new order page to send Ether manually from admin panel

Free to use for Ether. No fee.

The minimum amount of Ether can be set for purchase to protect you from spam purchases

The quantity increase/decrease step is configured per product

The Ethereum transaction hash and link is added to the order notes to assist you in corner cases

Stock availability is auto-managed

Decimal product quantities can be inputted by users – you can sell 0.5 Ether for example

The Ethereum Gas price is auto adjusted according to the etherchain.org API

The Hot wallet private key is auto generated first time plugin is installed

Previous Hot wallet private key is stored in a hidden option object when new one is entered. This feature can save your life, seriously

#### PRO FEATURES

Includes all FREE features, plus:

Sell any ERC20 token for any WooCommerce supported currency

Your customer can buy Ether or ERC20 tokens just like any other product in WooCommerce

Dynamic ETH or ERC20 token price from Coinmarketcap.com, Cryptocompare.com, Coingecko.com or metals-api.com can be configured. Set

token price in Ether or any other crypto including the token itself, if listed on exchange, or bound it to a gold price

The Input in store currency option: input product price in the store currency like USD, instead of the cryptocurrency selected

The Input in fixed store currency option allows to create product with fixed price like 100\$, but with a dynamic amount of cryptocurrency to be sent after this product purchase

The Ethereum Address input box on the Add new order page is pre-populated with an address generated by the Ethereum Wallet plugin if installed

Display base cryptocurrency price for dynamically priced products option

Use Ethereum Node JSON-RPC Endpoint setting for your own Ethereum or Ethereum fork node usage

The Expiration period configuration option can be used to set the number of days to wait till mark an order as expired if no payment or blockchain transaction confirmation is detected. It is set to one week (7 days) by default.

The Require enough Ether on a Checkout page? configuration option can be used to prevent spam orders creation by users with not enough Ether on their balances to pay for it.

Binance Smart Chain (BSC), Polygon (MATIC) and any other EVM-compatible blockchain support

The MultiSend contract can be used to process many ERC20 orders at once to speedup orders processing up to 200 times and save gas fees.
