Description

Flangapp V1.3 SAAS Online app builder from website Free Download

Flangapp is world's first platform for creating applications from a website using the SAAS model. You just need ti complete a simple installation, create pricing plans, and get payments for every build. And you get full white label with your brand and logo. Try out the demo now!

It is important!

Please note, that Flangapp has deep integrations with some external services and APIs:

GitHub is an applications code storage service.

Expo snack SDK – tool for real-time app preview.

Codemagic is a service for app building and publishing. You have 500 minutes free per month (that's about 90 app builds). Codemagic provider controls overlmit use and takes an additional fee for this.

The terms of these API services can change any time and the author cannot do anything about it or guarantee uninterrupted work.

The mobile app we get works on Android and iOS devices using WebView technology.

Test credit card number: VISA 4242 4242 4242 4242 MMY 12/25 CVC 321

The process of app creation is simple: write a name, a link to a website, set a color scheme, select a template. You can work with any site, any CMS. And it takes less than 9 minutes to create an application.

It is easy to test the application before paying and building. With Expo Snack SDK integration, your users can view their app in real time and make changes quickly. We simulate a real application using React Native, and show the expected result. After building, user receives a fast Flutter application.

Create your own pricing plans and app builds conditions. Accept credit cards worldwide with Stripe. No need to redirect to the Stripe website – the entire payment process goes in one click on your website!

Create PUSH messages and control statistics without using the interface of third-party services. OneSignal API is already integrated in the Flangapp interface and is ready to work with Android devices.

Easy installation and commented source code will help you finish your project. We can always help – our support team guaranteedly responses within 2 business days or faster.

Fast Android and iOS apps on the same Dart codebase.

All the most important functions for your App.

Create interesting navigation using icons from our big collection.
