Komento Pro 4.0.3 - Component Of The Comments System For Joomla

The progressive component Komento Pro will allow your site visitors to leave comments on the articles, blogs or products that they like on the pages of the Internet resource. Komento's powerful and useful features made it one of the best extensions in the catalog in December 2012. It is highly secure, lightweight and compatible with all Joomla versions and is available for free download.

This extension completely transforms the commenting system. Freedom is gained in interacting with communities and expressing their thoughts by users.

This component provides the following benefits:

Instant activation of interactions with honey by users and receiving feedback from visitors to your site;

Professional control of all incoming comments or spam with one simple centralized system;

Ability to move comments from other extensions so that the Komento component can display them;

Handling comments in JomSocial, ZOO, redSHOP and many other extensions;

Managing certain activities that certain users or user groups can carry out in the comments area.

By using the Joomla extension, you can pin outstanding comments so that even more users can read them. This allows the most popular comments to appear prominently in a special list.
