Description

Link Whisper Premium V2.3.4 WP Plugin Free Download

Link Whisper Premium V2.3.4, Link Whisper Premium Plugin for WordPress lets you quickly build smart internal links both to and from your content. Additionally, gain valuable insights with in-depth internal link reporting. It is a revolutionary internal linking tool to speed up the process of internal linking for SEO and help your site rank better in Google.

Automatic Link Suggestions As You Write

Link Whisper is a smart internal linking tool. Powered by artificial intelligence, Link Whisper starts suggesting relevant internal links when you start writing your article right within the WordPress editor. Depending on how many articles you have on your site and the relevance of your existing content, Link Whisper will suggest dozens or more internal links from the content you are editing. Just check the box and hit save. Internal links are done.

Quickly Find and Build Internal Links to Old Posts That Need More

Ever wondered if you have any “orphan” content out there that doesn’t have a single internal link built to it? With Link Whisper you can quickly see which pages have very little or no internal links pointing to them. But it doesn’t stop there! You can just as quickly click “add” new internal links TO those articles with very few internal links pointing to them.

Automatic Links from Keywords of Your Choice

Want to build internal links faster for SEO? Try Link Whisper’s “Auto-Linking” feature! Simply input the keyword you want to build links from and then specify the URL you want those links to go to. Just like that and Link Whisper will automatically build links from all past and future mentions of those targeted keywords to the page of your choice.

Internal Links Reporting

With the in-depth link reporting, you can take control of your site structure and get the data you need to truly optimize your site. Not only can you get a great overview of your entire site, but you can also see how many outbound internal links and external links are coming from each article. The links stats dashboard gives you a complete understanding of internal and external links as well as any broken links, errors, or posts that could use some additional internal links.

Fix Broken Links

Wonder if you have an 404 pages or broken links on your site? Link Whisper makes it extremely easy to see all your broken internal and external links. You can also quickly edit or remove any broken links within Link Whisper.

Add Target Keywords for Even Better Internal Links

Add your target SEO keywords that you are trying to rank for in Google and Link Whisper will suggest the most relevant links for your articles. Already use plugins like Yoast SEO, Rank Math, or All in One SEO to set your target keywords? Link Whisper will automatically pull in those target keywords, so you don't have to duplicate any work!

Get Traffic Data from Google Search Console

Link Whisper has an optional setting where you can connect and pull in traffic data from Google Search Console. This allows you to quickly see organic traffic, average position, and what keywords are bringing in results for your article. This keyword data can be invaluable to adjusting target keywords and internal links for SEO to maximize results.

Get Internal Link Suggestions for Other Sites You Own

If you own multiple sites that use Link Whisper, you can "connect" them and start getting link suggestions between the sites you own. This can be especially powerful if you have multiple sites in a similar niche.

Improve Rankings

Internal links are a standard way to increase rankings in Google. Now you can do it faster.

Powerful Reporting

Quickly take control of the internal link structure of your site; including, internal, external, and broken links reporting.

Editor and Theme Capatible

Compatible with nearly all editors and themes: Classic, Gutenberg, Beaver Builder, Thrive, Architect, Elementor, WooCommerce, Kadence Blocks, and most other editors and themes.

Time Saver

Finding content, selecting anchor text, and inserting links takes a long time. Let Link Whisper do most of the work for you.

Simple Install

Setup is as simple as installing the plugin and activating it. Links suggestions will then happen automatically.

Easy to Use

It really is as easy as reviewing the link suggestions and checking the box next to the ones you want. Click and done.
