RECENT UPDATE – MYCRED V2.6.3

WOOCOMMERCE CART & CHECKOUT BLOCK COMPATIBILITY

With the recent update rolled out by WooCommerce, myCred has aligned itself with the same. myCred is now compatible with WooCommerce's cart & checkout block compatibility, making it easier for users to fill out the checkout page seamlessly.

FEATURES

POINT MANAGEMENT

Empower your WordPress website users by rewarding them points – each user has their own POINT BALANCE that can be used in purchasing online products or online activities.

- Point Balances: Each user on your website will have their own point balance, where they'll be able to gain/lose viewpoints.
- Account History: Each time a user gains or loses points on your website, the transaction is logged into a central log for accountability.
- Points Management: You have full control over your users' point balances; You can adjust your user/s balance by adding or removing points with or without a log entry.
- Automatic Points: Automatically award or deduct points from your user's balance for their interaction on your WordPress/WooCommerce website.
- Multiple Point Types: Create multiple point types through the admin area to manage things easily. There is no limit to the number of point types you can have at your disposal.
- Buy Points: The buyCred add-on allows your users to purchase points using real money using some of the most popular payment gateways available in the market today.
- Store Payments: myCred supports some of the most popular store plugins for WordPress, allowing your users to pay for orders/tickets using their point balance instead of real money.
- Upload Point-type image: Give your point type a unique identity by assigning them an image.
- Import/Export Points and Point Types: Save time by importing/exporting user points and point types (all or specific). You can also export setup settings for all point types.
- Import/Export Setup Settings: Setup myCred quickly by importing/exporting setup settings in JSON format. Export option is available for all or specific user fields.

GUTENBERG BLOCK SUPPORT

Merged myCred Gutenberg to myCred Core.

Gutenberg block support for the following shortcodes: mycred_cashcred, mycred_badges_list, mycred_buy_pending, mycred_chart_circulation, mycred_chart_gain_loss, mycred_my_chart_gain_loss, mycred_chart_history, mycred_chart_balance_history, mycred_chart_top_balance, mycred_chart_instance_history and mycred_chart_top_instance.

BADGES & RANKS

- Open Badge Functionality – new opportunities to recognize and validate achievements digitally.
- Add badge details (name, achievement, website details, etc.).
- Badge recognition and validation through different badge verification websites.

- Single Badge Page is an exclusive page for each badge and its information (badge name, image, badge description, achievements, and benefits)
- Open Badge Search Filter – [myCred badge list] shortcode gives you the ability to add search fields and filters for badges.
- Evidence Shortcode – Technical support for badge verification purposes.
- Badge Evidence Download Button – Access Open Badges of any users on the website. The admin can also download any given badge images.
- The “Quick Edit” badge option will allow you to modify the information of any particular badge.
- Social share setting – Allow users to share their achieved badges on their social profiles.
- Import/Export User Badges – Import/Export option for user badges (all or specific). The admin can import badges with ID/Title/Slug.
- Import/Export User Ranks – Import/Export option for user ranks (all or specific). The admin can import ranks with ID/Title/Slug.
- Export Options – The admin can easily export badges and ranks in a raw or formatted file. The export option is available for all or specific user fields.
- Award Badges/Ranks on Coupons – Assign user badges and ranks to coupons so that users will get rewarded when using specific coupons at checkout.
- Attributes – Introduced title, excerpt, and display attributes in mycred_my_badges shortcode

CASHCRED

GIVE USERS THE POWER TO CONVERT THEIR MYCRED POINTS INTO REAL MONEY.

cashCred is a built-in myCred add-on that allows users to redeem myCred points for real money anytime, anywhere. Give users the power to earn points through myCred’s intelligent rewards system. Instead of giving them cash, you reward them with points that can be encashed at any time.

cashCred works perfectly with a reward system that engages users to perform activities that require user interaction (watching a video, filling out a survey, and more).

- Convert Points to Cash – Users can redeem myCred points for money.
- Multiple Point Types – Allow multiple custom point types.
- Exchange Rates – Define exchange rates for each point type.
- Cash Withdrawal – Users can send a request to the admin for cash withdrawal
- User Requests – Approve or deny user requests for cash withdrawal.
- Additional Notes – Write additional notes for users, which will be displayed on the payment form.
- Currency Code – Define the currency code (USD, GBP, AUD, etc.) for the payment form.
- Shortcode Support – Display the cashCred module on the website using a shortcode.
- Set Limits & Restrictions – Set minimum or maximum restriction limits on point conversion requests.
- Pay Through PayPal – cashCred supports payment through PayPal.
- Pay Through Stripe – cashCred supports payment through Stripe.
- Create email events/templates for cashCred pending/approved/cancel requests.
- Point Transfer – Users can transfer cashCred points to other users.
- Min/Max Fee – Setup Numerical Difference (set a range for Minimum and Maximum fee).
- Fees (points/percentage) – Setup Parameters (fees can be set up using points or percentage).
- Registered References – All registered references will be listed on the support page.

TEMPLATE TAGS

- Signup Referral Hook (%user_name%) – This hook returns a username whenever a user signup using a referral link.
- Sell Content (%Price%) – This template tag returns the number of points a user needs to purchase content.
- Badges (%badge_title% and %badge_image%) – Display users’ new badge title and image in the outgoing email.
- Ranks (%rank_title% and %rank_image%) – Display users’ new rank title and image in the outgoing email.

DEDICATED LOG

Each time myCred adds or deducts points from a user, the adjustment is logged in a dedicated log, allowing your users to browse their history. This log keeps a record of your user’s accountability, badges, and ranks, among other useful statistics.

This log data can be converted into charts to help you visualize the usage and circulation of points on your website.

You can achieve the following features by using a dedicated log for your points system:

Set a limit to the maximum number of times each hook can give out points to your user.

Badges will use the log’s data to determine which user has earned a badge.

Add-ons such as Sell Content use the log to track users who have purchased posts from your website.

Add-ons use the log to ensure that a user does not gain repetitive points for the same interaction within a given time frame.

CENTRAL DEPOSIT

Central Deposit is a built-in add-on that allows the admin to nominate any available user account to become the primary account from where all point-related transactions are managed.

Central Deposit Account – The admin can choose any existing user account to become a central deposit account that controls all points and their transactions.

Centralized Transaction Mangement – Any points spent or earned are recorded in a point log that can be accessed from the user’s myCred admin dashboard.

Ignore Manual Adjustments – After a central deposit account is nominated, the admin can not add points to the customer's account manually.

Set Starting from – Setup the starting date

Interval (in days) – Deposit points after x days interval.

Amount – The amount of points to be scheduled.

Recurring – Enabling this options will deposit the amount recursively after the defined interval. We have also added two new email triggers for Central deposit.

Added Email notification on Minimum balance in central deposit.

Added Email notification on No balance Left in central deposit.

ACHIEVEMENTS/ASSETS

Issue badges for any combination of achievements.

Detailed badge categorization.

Industry-related achievements.

Achievement list Shortcode allows you to display myCred badge listing in tabs individually or in a category.

ADDITIONAL FEATURES

– White-Labeling: myCred has built-in support for white-labeling: This allows you to rename the plugin in your admin area to anything you like.

– Import & Export: myCred comes with three built-in import tools allowing you to import points, log entries, or migrate your CubePoints installation.

– Multi-Site Support: myCred has built-in support for multi-sites, allowing you to choose between using a unique myCred installation or centralize balances across your network.

– Leaderboards: Generate leaderboards based on your user's balance or points history – display users with the most points for a particular instance.

– myCred referral stats shortcode: The [mycred_referral_stats] shortcode allows you to display the total count of referred visitors/signups users on your website.

– Theme Independent: The myCred plugin is theme independent – Your theme needs to support widgets and shortcodes to run myCred.

– BuddyPress Ready: myCred has had built-in support for BuddyPress through which you can access BuddyPress-related features like Insert point balances/badges/ranks into your user's profiles.

– Bootstrap Ready: myCred comes with minimal CSS styling to give you the freedom to style everything according to your needs.

– Translation Ready: You can add your own language translation or adjust the built-in translation support.

– Back-up of your data – Remove all/specific data upon plugin deletion from the database or keep it as a backup.

– A timeframe attribute in [mycred_my_balance_converted] shortcode – users can see their converted point balance in a given timeframe using predefined filters (Yesterday, Today, this week, this month, last month).

– A "Bulk Assign" tool for awarding/revoking points, badges, and ranks in bulk.

– Exclude user roles – The admin can exclude any user role from receiving points. Previously, the admin could only exclude users using user ID only.

– Enable/Disable add-ons – Save time and use toggle buttons for enabling or disabling add-ons.

– Treasures – A brand new collection of attractive graphical images that can be used for ranks and badges.

– Suggestions – Submit your ideas and suggestions on the new suggestion page.

BUILT-IN ADD-ONS

myCred is much more than just a point management system – The plugin comes with several built-in add-ons that enable you to perform complex tasks such as transfer or buy points for real money, allow payments in stores, etc.

– Badges: Award your users badges based on their points history.

– buyCred: Let your users buy points in exchange for real money.

– Coupons: Create coupons that can be redeemed for points.

– Email notifications: Setup email notifications for status updates.

– Gateway: Let users pay with points in your store.

– Notifications: Enable popup notifications that display status updates.

– Ranks: Create ranks based on the user's point balance.

– Sell Content: Sell your content in exchange for points.

– Statistics: Get a statistical overview of points in circulation, etc.

– Transfers: Allow your users to transfer points to other users.

Power your WordPress website with 50+ add-ons ranging from categories like Gamification and Freebies to Third-Party Bridges and Store Gateway.

BUILT-IN PLUGIN SUPPORT

myCred supports some of the most popular WordPress plugins like BuddyPress, WooCommerce, Jetpack, Contact Form 7, Disqus, Gravity Forms, among countless others.

Simple & organized To keep your admin area organized, myCred will only show features and setting for those third-party plugins that are installed and enabled.
