What's Included

Laravel Admin + Seller Panel (Laravel + Vue)
Customer Website (Vue)
Customer Flutter App

Features

Module: Shopy contains food, grocery, eCommerce & pharmacy module. So most of the business done in those modules

Zone: Zone is a better option to represent your shop in your area. So customers can't see you shop out of your zone

Shop Plan (Subscription): Seller can choose your best plan to start a shop. All plans have different advantages

Coupon: Offers can attract more customers as more revenues. Coupons have modules, zone, shop based & other controls

Wallet: Customer can add money into wallet and use it when ordering anything

POS: Point of Sales is useful to take orders at a shop or restaurant

Employee: If you need more than one person can control then create an employee for your shop

Role Based : Role is restrict uses of your employee. Security is our utmost priority

Notification : We use FCM notification for orders status. Admin can also send a notification for latest updates or new offers

Loyalty Wallet: Every order gives a loyalty point to the customer, and that point converts to the wallet money & purchase anything from wallet

Refer & Earn : When customer create an account it they enter referral. Then some money added to wallet.

Review System: Customer can provide a review to a particular shop, product, and delivery boy. So that other customers can see and make decisions.

Reports: Admin & Seller can see reports for every day or any range of dates. It helps to keep track of revenues

Addons : There is some product that can have many addons. So the seller can attach add-ons to that product

Units: Unit is useful for the same product with multiple options, Look like Pizza sizes are S, M, L

Dashboard: Admin and seller need to see everything in one place, It's the dashboard. We provide beautiful with minimal design dashboard

Home Layout: Admin can control what see's on the customer app home. So admin can advertise any shop and products

Invoice: When an order is created the customer will receive an invoice over a mobile number and email. They can also access from the mobile app

Order OTP : OTP is send over mobile and apps. It needs when the delivery boy delivers any orders.

Print: You can print an invoice if you have attached printers or download a pdf for the order.

Newsletter: Customer can join your newsletter, Where admin can see all the subscribers and sent a promotional email to all

File Manager: Admin can see all images (Files) in a panel. So it will use when editing or creating any products

Category : Category & sub category useful at search and filter out products.

Assign Delivery: When an order is ready the delivery boy automatically assigns that order or the seller can also assign manually

& Much more : Their so many other features available. You need to take a look at the admin panel.
