Wallet System for WooCommerce V2.5.5 WP Plugin Free Download

Wallet System for WooCommerce V2.5.5 – Digital Wallet, Cashback Rewards, Recharge User Wallets, View Transaction History

SLEEK AND SPEED-UP TRANSACTIONS WITH A DIGITAL WALLET SYSTEM FOR WOOCOMMERCE. ADD OR REMOVE BALANCE IN BULK, SET TOP-UP SUBSCRIPTION, RESTRICT USERS, VIEW WALLET USERS' WITHDRAWAL REQUESTS, AND DOWNLOAD USER WALLET TRANSACTION HISTORY.

Wallet System for WooCommerce is a digital wallet plugin. It helps you implement a digital wallet system on their WooCommerce store and lets customers buy your products & services with swift WooCommerce payments. It is one of the fastest WordPress Payment plugins.

The WooCommerce wallet allows users to add funds. using the available payment methods on your store and see their wallet transactions list. The merchant can manage the customers' e-wallets and change the wallet amount.

This WooCommerce payments plugin will significantly improve the payment & order processing speed. It shortens the average checkout duration as the customers can pay for items within seconds without entering their transaction details each time. In conclusion, wallet funds usage will better the overall user experience.

The WooCommerce Wallet increases the ease and security of the payment process. making it a must-have WooCommerce payment plugin for your online store.

SALIENT FEATURES OF THE WOOCOMMERCE PAYMENTS PLUGINS

1. Adding Balance to Digital Wallet Account

Customers can add balance to their digital wallets using the available WooCommerce payment methods. During the top-up checkout process, you can make the form fields accessible for users. By default, they are hidden. Also, you can choose to make wallet recharge orders tax-free.

2. Negative Wallet Amount

The Wallet system for Woocommerce allows you to credit the negative amount in customers' wallet. The negative amount will get debited once users recharge their wallet.

3. WooCommerce Wallet Recharge By Admin

As the admin, you can recharge or deduct customers' wallet balances in bulk or individually and also mention details for every transaction you make. For example, a bulk top-up during Christmas to all WooCommerce Wallet users with the "festive gift" as the transaction detail.

4. Skip Payment Gateway for Cashback Reward

You can restrict the use of any WooCommerce payment gateway for giving wallet cashback rewards. Afterward, customers can avail of cashback rewards only by using the available payment gateway. By default, they receive cash back no matter what payment option they choose.

5. Use a Different Email Address for Wallet Notification

You can choose a separate email address to send email notifications to your WooCommerce Wallet users. By default, all emails regarding the wallet are sent via the WooCommerce email address.

6. Auto Order Complete

You can enable the auto-complete feature for orders placed with wallet payment. So, this WordPress payment plugin will speed up the order fulfillment process as the wallet-paid orders will be automatically marked "Complete".

7. Selectively Bulk Edit Wallet Balance

You can credit and debit value into customers' wallets selectively. From the user list, you can choose any number of users in bulk and edit their wallet balance as you need. Our WooCommerce payment plugin will enable you to nurture users as a part of your marketing campaign or penalize them for any suspicious behavior.

8. Refund Through Wallet or Payment Gateways

You can refund the value of purchased products & services directly into customers' wallets. A full or partial refund can be made to their WooCommerce wallets. In case of a partial refund, you can send the remaining refund balance using your payment gateways.

9. Select Partial Payment Option

You can enable customers to use their WooCommerce wallet balance to pay for products in two different ways: Total Wallet Amount and Manual Wallet Amount. They can use the whole wallet balance while making a purchase. Or manually select to pay a partial payment of their choice.

10. Download Transaction History [Admin]

You can download the transaction history in a PDF file from the Wallet Transaction table with a single click. It will contain the following data: Name, Email, Role, Amount, Payment Method, Details, Transaction ID, and Date. It will contain the entire wallet's WooCommerce payment history in a tabular format.

11. Automatic Wallet Subscriptions Top-up

You can create a daily or weekly top-up subscription plan to recharge customers' wallets automatically. And customers are free to select the wallet subscription top-up amount. The user can't do regular recharge when this wallet top-up subscription is enabled. Also, a new subscription will be created on every recharge in the middle of the subscription interval.

12. Wallet Recharge Orders

The Wallet Recharge Orders sub-menu is added to the WooCommerce section upon the wallet plugin activation. It contains the list of recharges or top-up orders made by your customers that you have to approve manually. You can filter this list by status.

13. Wallet Balance Withdrawal

Customers can file a withdrawal request to withdraw their wallet balance into their bank account or other payment applications. The merchant has the power to approve or reject these requests in the wallet Withdrawal tab, but they have to address each request individually. The request table will also show the username and profile link.

14. Email Notifications

The Merchant can allow customers to review email notifications on the wallet recharge, the WooCommerce customer credit, and the deduction of the wallet balance. Our WordPress payment plugin will keep your users updated about the current values of their wallets.

15. Flexible Payment Option

Customers can use their WooCommerce Wallets as a payment option if the wallet balance is higher than the total cart value. They can use it as a partial payment option when the wallet balance is lower than the total cart value.

16. Transaction History [User]

The customers' wallet transaction history contains wallet recharge, debit, credit, transfer, and withdrawal entries. You can also see edits they've made to customers' wallet accounts and the list of customers' transactions.

17. Wallet Amount Transfer

The customers can transfer their wallet amount into other customers' wallets. It will help the merchants increase user interaction on their WooCommerce store and result in an increase in the wallet user base.

18. Wallet Cashback Reward

The Wallet system for Woocommerce allows you to send Wallet cashback rewards to customers in their WooCommerce wallets. Even if the payment method used to purchase the product is other than the wallet plugin, customers will still receive cashback rewards. You can set the cashback type as percentage or fixed and offer it cart-wise or category-wise.

19. Credit Amount on Daily User Visit, Commenting, and Sign Up

Our WooCommerce wallet plugin allows you to implement a WooCommerce credit system. You can decide a daily login reward amount and enable your customers to earn wallet credit daily by simply logging in to their wallets.

You can also let them earn wallet credit for submitting product reviews. For this feature, you can set the limit on how many comments a user can have per post, credit amount, and customize comment label text.

Lastly, allow your users to receive wallet credit upon signing up for the wallet system. Set the signup reward amount and description that is shown to the users on signup.

WITH THE WOOCOMMERCE WALLET YOU CAN:

Transfer Vendors' commissions directly into their wallets.

Show checkout fields to users during the top-up process.

Show the wallet transaction date & time details in your selected time zone.

Items bought via the WooCommerce wallet will be automatically marked complete.

You can change your email address to send wallet notifications to users.

Restrict WooCommerce payment gateways for availing cashback rewards.

Use the [wps-wallet-amount] shortcode to display the wallet amount anywhere you like.

Wallet subscription to automate regular recharge.

Selectively edit (credit or debit) the Digital wallet balance of specific users in bulk.

You can refund the full purchase value to users' wallets. Or you can refund partially into their wallet or manually through the payment gateways.

Users can redeem WooCommerce gift cards to top-up their wallets.

The merchant can see all users' transaction history (filtered by users) and download it in a PDF file.

Use the shortcode [wps-wallet] to display the user's wallet on any page.

Customers can see their wallet transactions (credit/debit) and transfer their wallet money to other users.

Merchants can add transaction details while editing the wallet balance of users in bulk or individually and underline the purpose of credit or debit.

The admin can restrict any particular wallet user from using the Add Balance, Wallet Transfer, and Wallet Withdrawal Request features at once.

Allow customers to earn wallet credit on daily login, signup, and submitting reviews on your product pages.

If the WooCommerce wallet amount exceeds the order total, it will work as a payment option and show in the payment method selection.

If the WooCommerce wallet amount is less than the order total, customers can use it to pay a total or partial amount to buy products.

Implement a digital wallet cashback system cart-wise and category-wise and send all cashback rewards into users' wallets.

Both debtor and creditor email IDs are shown in the transactions table to customers.
