Salient Features of WhatsStore SaaS – Online WhatsApp Store Builder

The transition from the Front End to the Back End

The effective management of the store always requires a strong back end. Now, it doesn't matter if that store is online. It still would require an effectively functioning backend for a smooth front-end implementation. While you can manage product inventories and orders from the backend, you can fulfill the orders with an interactive front-end interface.

Dashboard

Since the store operates on two fronts, It would offer 2 dashboards for the effective management of both; the back end and the front end.

Get an overview of total products, sales, and orders along with a list of your top and recent orders here. Also, find the order graph of your past 15 days here.

Get entire store analytics, right from traffic through various browsers, devices, and platforms to your top URLs, get every insight about your visitors on this dashboard.

Customer Login and Registration

With the help of the customer login and registration module, the customer can only place the order when he/ she has already registered and logged in. This is for the safety and security purposes of the customer as well as the owner due to the authentication of information. Also, the customer can take a look at his/ her previous orders.

Email Notification

A well-organized channel and flow are the helpful tools of any organization, which helps in transparency. With the help of the Email Notification module, when an order is being completed/ placed by the customer, an email notification with the order details will be sent to the registered email id of the customer as well as the owner to keep the work in streamline.

Shop

PRODUCTS

You can find all the products of your store here. WhatsStore SaaS allows you to view your products in Grid and list view. Manage every aspect of the product, from its name, price, category, quantity, SKU, product description, and image through this tab. All in all, this tab can help you keep your inventories in the tab.

PRODUCT CATEGORIES

Create product categories based on your distinctive product portfolio over here.

PRODUCT TAX

Create tax applicable to your storefront and assign rates to them over here.

Orders

You can view a summary of each order here. From order details, billing, and shipping information to payment status, get every detail about a particular order number over here. Set the order status and print the receipt from over here.

Store Setting

Details about store, descriptions, header, footer, subscriber settings can be settled from here. Manage social media settings that would appear on the footer section from here.

System Settings

Manage the site and email settings of your store here. Also, secure the payment end of your store with system settings. It allows for various payment gateways.

Store Front-End

The front end would offer a representation of all the settings you applied in the back end. That is to say, it would create a shopping site view on the front end. Products would be listed category-wise over here. Get complete product details by clicking on a tab and the users can add requisite products to the cart. The client then can proceed to checkout after adding the required shipping and billing details. Further, they can finalize the order by initiating payment through a secured gateway. Once the order is placed, Stock would be managed accordingly in the backend from the product inventories. Also, users will get a unique order link.
