Description

SS WooCommerce Myaccount Ajax Tabs WP Plugin Free Download

WooCommerce Myaccount Ajax Tabs V2.4.0 is a clean, simple and light weight plugin which lets you customize WooCommerce myaccount tabs and convert them into ajax tabs.

As of WooCommerce 2.6+, the "My Account" links are shown in form of tabs. These tabs link to individual pages instead of inline content. This is where the plugin comes into action. Users can navigate through tab links without page refresh. The tab contents are fetched through ajax request and served on same page. Once all tabs are loaded, the plugin saves tab content and serves it without making duplicate ajax call. Thus, users can navigate through tabs multiple times without any load on server.

With WooCommerce Myaccount Ajax Tabs Plugin, you can easily customize myaccount tabs and add new tabs of your choice. The new custom tabs can be re-ordered using drag and drop sortable list. Furthermore, the tab content supports template overriding. i.e. if you wish to use custom php code in myaccount tabs, simply copy the php files in theme with same endpoint name and the plugin will detect it. The built in content area for tabs support HTML and Shortcodes.

The plugin works seamlessly with WordPress, WooCommerce and any decently coded theme. The total size of assets used in this plugin is no more than 60KB (out of which 28KB is the preloader image). It can be a good choice to give your visitors a good user experience, especially when you get a lot of traffic and server load.

Key features:

- Fully compatible with WordPress 6.2.x and WooCommerce 7.8.x
- Works with all standard themes and decently coded premium themes
- Converts WooCommerce my account tabs into ajax tabs
- 3 tab styles (Default, classic and flat)
- Vertical tab orientation supported for all styles
- Automatically converts extra tabs into a more link submenu – New
- Saves tab content for multiple tab navigation per session. (No repeated ajax calls)
- Customize my account tabs – New
 - Add unlimited new tabs of your choice
 - Reorder tab positions using drag and drop sortable UI
 - Delete tabs of your choice or re add them any time

- Add custom content for tabs. (Supports HTML, shortcodes and complex markup)
 - Override tab content by copying endpoint php file in theme
 - Re order WooCommerce default endpoints by deleting them from WooCommerce settings and re adding via this plugin
- Unbranded plugin settings page
