### Description

WP Job Manager Applications V2.5.2 Add-On WP Plugin Free Download

Allow candidates to apply to jobs using a form & employers to view and manage the applications from their job dashboard.

#### Features:

Allow candidates to apply to jobs via a form and store applications in the database

List applications in the employer job dashboard and admin dashboard

Privately rate and comment on applications, and organize them by status

Developer-friendly code for easier customization

The Applications add-on lets you show an application form on your job listings instead of the standard mail/website links.

The application form replaces the usual links and shows form fields for the candidate name, candidate email, cover letter/message, and an upload field for the candidate to attach their resume file.

Submitted applications get stored in the database, and the employer also gets an email notification.

The application form can be edited from the backend using our editor. Add, edit, and remove fields.

The editor also allows you to customize the email notifications sent to the employer and the candidate.
